

Hello Worthwhile team!

Helping people is one of my biggest passions and so when I became a Software Engineer, I knew I had to apply these skills in a way to support others and smaller businesses. Reading about Worthwhile's vision to help mid-market companies, I knew I had to apply and have a chance to contribute to a company that aligns with my passions. With the knowledge I have as a Full Stack Engineer, I believe I can contribute greatly to Worthwhile as a Front-End Engineer because I understand both sides and the flow of data.

Recently, I worked as the UI Lead to create a Web Application that would allow users to attend certain local events, while also offering ride-sharing services. Although the application was initially stated to be used on a desktop, we had to create a design and UI that would work well for both desktop and mobile. Discussing with a team of engineers, we considered several different options, but eventually decided to move forward with a mobile-first design. We focused on making a clean and minimalistic user interface so that the users would be able to access the application's functionalities whether they were viewing from a desktop or mobile device. Given the responsibility as UI Lead, I had to learn how to collectively utilize the team's input and create a design that not only focused on our customer's needs, but also was the result of a team effort.

I would love the opportunity to use my knowledge with full stack and my skills as a Front-End Engineer to contribute to Worthwhile and build worthwhile products. I truly appreciate you taking the time to read this cover letter. I would love to set up an interview to further discuss my skills and how I can best help Worthwhile. Thank you in advance!

All the best,
Jinhoo Bong
